EngineAI T800 — Technical Inquiries

Technical Inquiries from IPQ Tecnologia to EngineAI

> **To EngineAI Support Team:** Below is the updated and simplified list of technical inquiries regarding the T800 humanoid robot, organized by operational domains.

1. Maintenance & Servicing

1.1. Routine Maintenance & IMU Calibration

What are the recommended procedures for routine maintenance on the T800? Additionally, is it necessary to recalibrate the IMU after an impact, and how is that performed?

1.2. Charging Base / Dock

Is there a charging dock or similar base available to charge the T800 without removing the battery, while keeping the robot powered off?

2. Hardware Diagnostics & Troubleshooting

2.1. Leg & Motor Telemetry

Is there a built-in diagnostic tool, API, or specific procedure to inspect motor telemetry and health status (specifically to diagnose potential play/looseness in the left leg)?

2.2. Component & Limb Replacement

Can our specific model have its limbs replaced? If so, could you provide documentation outlining how to perform this?

3. System Formatting, Files & Software Architecture

3.1. System Formatting, ISO & Specific Files

What is the standard process to reflash or format the system? Do you provide a dedicated ISO/system image, and can you send specific system files upon request?

3.2. NVIDIA CPU/Core Allocation

How many CPU cores does the NVIDIA board use natively, and how many are available for our custom projects?

3.3. Sensor Topics & Data Acquisition

What is the correct method to enable ROS topics (or similar APIs) to capture data from sensors like cameras, IMU, LiDAR, etc.?

3.4. Native Wi-Fi Configuration

What is the SSID name and password for the native Wi-Fi network, and what is its intended operational purpose?

4. Support & Workflow

4.1. After-Sales Support & Workflow

How does your after-sales support workflow operate, including standard communication channels, SLAs/response times, warranty terms, and escalation processes?
